

“Man is the sun; his senses the planets.”

—Novalis

Emerson spoke of an “ocean of universal mind” and Edison believed all thought was rooted from one source. Each of us are inlets to this infinite intelligence. The “Connection” is there to be made.

Connect

*The evolving binary mobius strip
delivering endless mental trips . . .
the paradox of deviations grips!*

*From the outer edge of spiritual darkness
the continuity of light resides . . .
a gravitational abyss
—relativity blessed—
a knowingsness not guessed!*

The Metaphysical Mystic

From the stone age through the industrial age onto the currents of the high-tech age—this global society has evolved to what is now a rapid pace. Despite the accomplishments from the conflicts of religion, science, politics and wars, there is still so much more we don't know. What about space and creation, the earth and seas, and most especially, the self, the soul that is you?

What We Don't Know

The Individual Relation

We all have a relationship to certain spots on this earth. Places where we live, sleep, eat and breathe, worklife and school too. The one commonality all humans share—The Earth. We each have an individual relation.

Emanating Interconnectiveness

*A meditative connection
contemplative reflection
Your inner “I”
focusing on your
outward “you”
The self you know and see
in the skin you wear
The days unfold
time elapses
The spirit housed in form
unfolds;
The self & soul you own—
an emanating interconnectiveness explored!*

A brief word from the Author:

“We each have the ability to transcend our own self-imposed limits. There is infiniteness in who you are; what you are; where you are. See it and seek it. Know your own worth and unfold with energized genuine enthusiasm each day!”

*From the Big Bang of Creation
the Universe grows and grows
Science brings the empirical evidence
still, Providence only knows*

Expanding Universe

When Copernicus proved the celestial revolutions of the planets—the mind of man was unleashed. When Newton was pondering upon the apple falling from the tree and creating Calculus—the foundations of classical science. Once again, mankind benefits and grows. Then Darwin comes along and further unchains the mind of man by giving us a Theory of Evolution and Natural Selection, which prompted further explorations of scientific possibilities. Then along comes Einstein and we get a whole new conception of the Universe—everything is relative—from the raw facts of time and space, to gravitation and the speed of light!

Copernicus, Newton, Darwin and Einstein all discovered in their unique way—scientific truths that have uplifted humankind. Each man became the voice and conscience of his age and a part of all other ages henceforth.
